Alu- holder assembly machine RU-CS-ZAE

For the automatic assembly of clip and pivot holders to the single bar

The economic automatization of the clip assembly can be achieved with our RU-CS-ZAE. Depending on the level of the automatization it's either a semi or full automatic clip unit. The holders and screws are fed, positioned and screwed on the wood profile automatically. The semi-automatic version has 2 hand wheels to adjust the correct position of the clip in the rear and in the front. The full automatic version has the possibility to move the rear contact roller ledge after the saved information in the PC- control automatically.
