Subject buffer

RU-FP

The specialist buffer for internal storage of wings.

The **RU-FP compartmentalised buffer** is designed for the structured temporary storage of large-format items. The uniform compartment spacing allows for clear and secure storage.

The base with adjustable feet or steel castors makes it easy to position the items. The compartment dividers in a robust tubular design ensure stability and clear separation of the components. The durable design is intended for use in production and internal logistics and can be flexibly adapted to different requirements thanks to the height-adjustable castor configuration. The bar compartment dividers are increasingly used in the manufacture of plastic windows.

Features:

- 16 compartments with a compartment spacing of 130 mm
- Compartment height 2500 mm
- PVC tubes as compartment dividers
- Steel rollers as base
- Accessible from both sides
